Just to confirm our phone conversation – Louis Berger estimated about 40 hours to clean up files related to the cost estimate backup and sediment process/dewatering mass balance. We will be charging that effort to 17-mile RI/FS oversight.

The last 3 bullets under “Focused Feasibility Study” are discussed in the ROD and responsiveness summary, and are supported in the record.

**Subject:** 8-mile ROD & RS Information request

As we discussed, we are reviewing your information request. For the 1<sup>st</sup> bullet point under “Model Information”, we will need a hard drive that fits at least 13 terabytes of information. As we also discussed, we will be charging the effort needed to pull the information together to 17-mile RI/FS oversight. I will get back to you on the other items in your information request.
